4.Drill the holes according to the marks.
 (Size of the holes: Dia 6mm,Depth 35mm)

Please ensure the ceiling is concrete solid construction with thickness at least 50mm! Or it may cause the screw anchors loose, even fall out. The dia of hole can't ne larger than !

5.Put the screw anchors into corresponding holes and knock them into the ceiling by a hammer until the outer edge of the screws along ceiling surface

6.Fix the kit to ceiling by 4pcs ST 4*25 long screws.

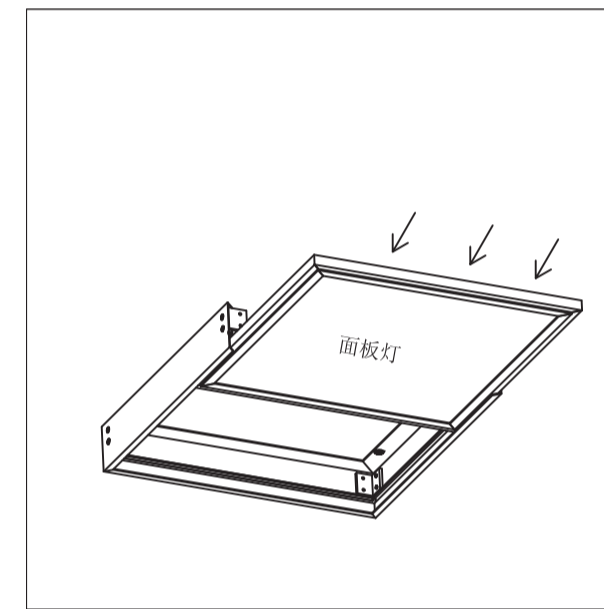

Note: the end cap must be well fixed by spanner, or, they may fall out with time going on.

7.Remove the non-fixed frame by unscrewing frames and connectors

8.Slide the LED panel partly into the kit. Connect the driver to the power supply. Refer to the instructions and safety information attached to the LED panel.

面板灯

Please ensure the Length of driver connect line is long enough to avoid the unnecessary presure when slide the Panel light into frame.

9.Insert the LED panel to the end. Fix the last frame and close the kit.
